

LARGER IMPLICATIONS OF (e)ID CONCEPTS

Kalev Pihl

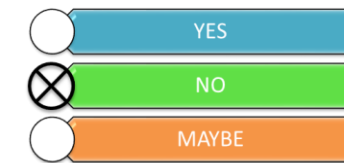

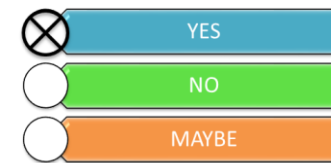

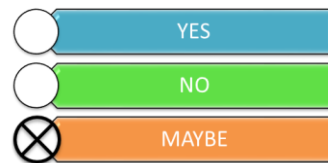

WHAT DOES PRIVACY LOOK LIKE?

- + No one has actually your data - nothing you do can be traced back to you

- + Many institutions have your data and you can control what they do with it:

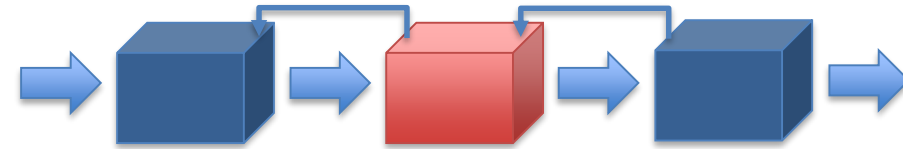

- Before they do it

- After they do it

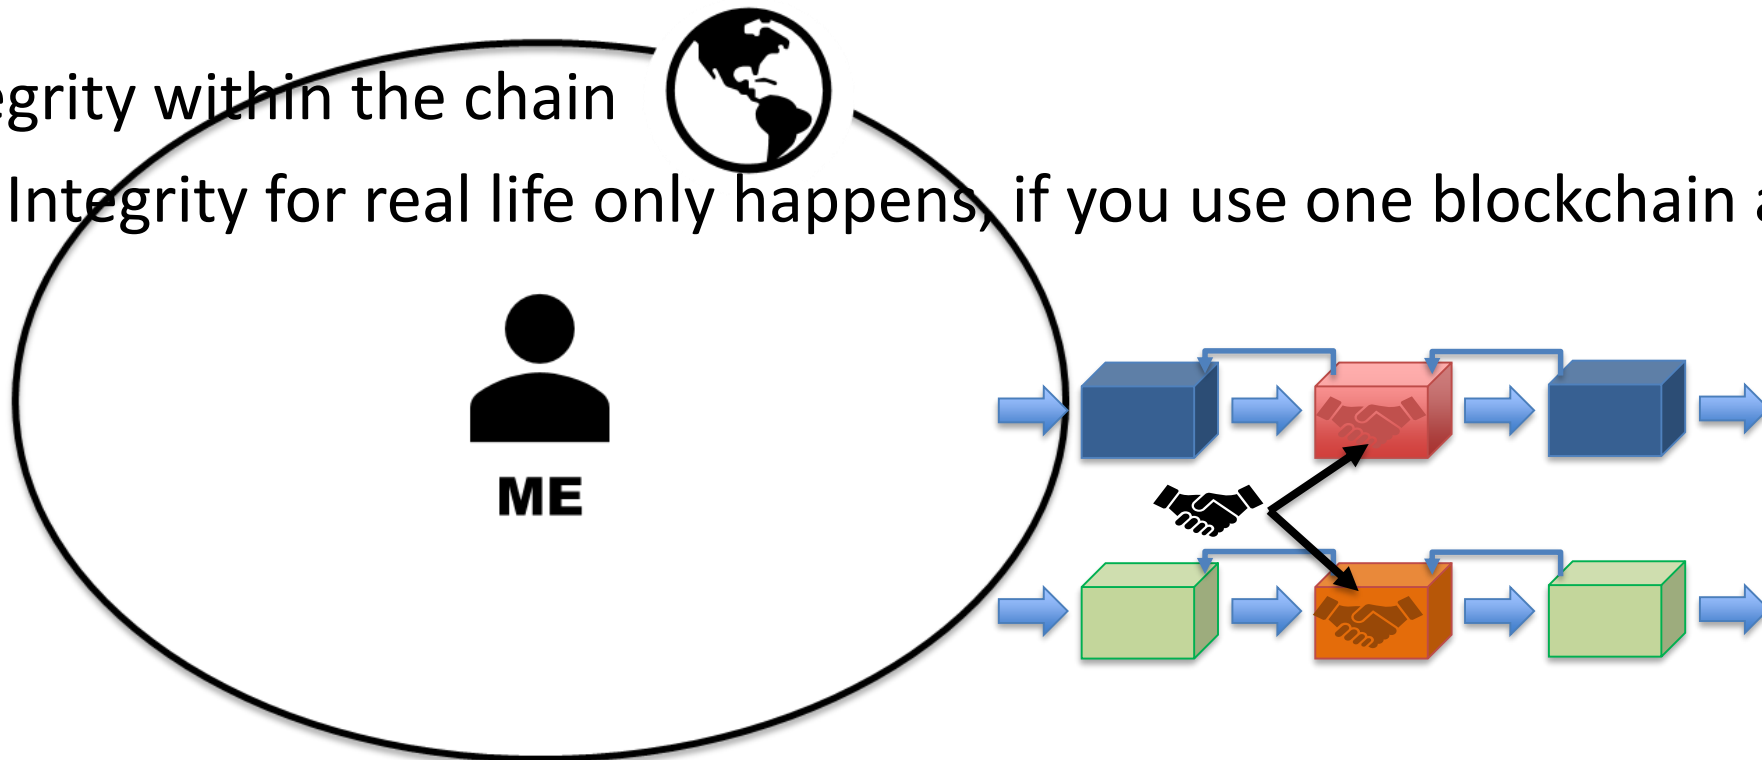

BUT BLOCKCHAIN ...

- + Self-Sovereign identity
 - You can prove your identity or attributes for every transaction

- + Integrity within the chain 
 - Integrity for real life only happens, if you use one blockchain at a time

EU FRAMEWORK

+ GDPR

- Protection against big non-EU companies
- No protection against governmental surveillance
- Almost impossible cooperation
- Constant attention!

+ DSM

- It is isolated from everything else
- It is fragmented inside
